

Environmental & remediation equipment & products

DiamondSystems

DIAMOND SYSTEMS CAN SUPPORT ALL YOUR PROJECTS

Adventus Group is the field-proven soil, sediment and groundwater remediation technologies solution. Our technically advanced remedial solutions treat a wide range of toxic contaminants to save you time and money with the best biotechnology.

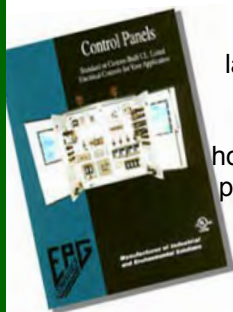

ADVENTUS

Proven Soil, Sediment, and Groundwater Remediation Technologies

EVERGLADES JUL09 ©Laura Lee-Walker

AquaBlok® is a patented, composite particle technology that utilizes a central core (often stone/aggregate) to deliver a broad range of coating materials that address a specific application requirement.

EPG Companies manufactures landfill equipment such as; landfill pumps, leachate pumps, sump drainers, submersible pumps, horizontal pumps, electrical control panels, controllers, system control panels, process controls, landfill controllers and completely integrated process control systems.

AMS sampling equipment is primarily used for soil sampling, soil gas sampling, sludge and sediment sampling, groundwater sampling and monitoring, geotechnical sampling and testing, and soil and ground water remediation activities. They are commonly used in the construction, golf, turf and grass, mining, and pest control industries.

Firestone Geomembranes are the durable, dependable solution for nearly any application. Whether for solar enhanced landfill covers, decorative commercial water features or critical containment applications such as

agriculture, aquaculture, mining and other water containment, Firestone's geomembrane systems are easy to install, built to last and backed by superior service.

Durham Geo Slope Indicator (DGSi) is dedicated to the design, manufacture, and supply of environmental equipment. Over 25 years of experience with pneumatic landfill pumps has produced the **SRX LP**. Proven components were optimized into a product that is simple and has few parts. The result? Reliability and effort-less maintenance.

Since 1986 **Rusmar Incorporated** has been lowering risk and improving profits for professionals in the solid waste and hazardous remediation industries. Our patented foam technologies, highly engineered application equipment and outstanding technical service combine to deliver superior results under the most demanding conditions.
